Investment Strategy Elevator Pitch

Protect the operating commitment with a staged liquidity reserve, invest longer-term capital through a diversified strategic allocation, and make any facility contribution conditional on funding resilience. Adjust portfolio composition as payments approach while preserving financial flexibility under adverse outcomes.

Investment Policy Statement

Our proposed strategy prioritizes the reliability of Laura's operating commitment while preserving flexibility for a responsible facility contribution. Before finalizing the policy, we will verify her available wealth, payment schedule, investment horizon and capacity for loss against the official case. No client amounts or portfolio weights are assumed in this draft.

We will separate near-term operating needs from longer-term investment capital. As required payments approach, the operating reserve will move toward eligible instruments whose liquidity and risk characteristics match those payments. We will assess payment coverage under adverse market and inflation assumptions rather than relying on a single favourable projection. A reserve will not be described as risk-free merely because its holdings are less volatile than equities.

Longer-term capital will follow a diversified strategic allocation consistent with the verified case and eligible universe. Each holding must have a clear portfolio role. We will evaluate growth potential alongside concentration, correlated losses, costs and the possibility that assets must be sold when markets are weak. We will not base required payments on an unverified short-term forecasting advantage.

We will consider a facility contribution only after evaluating the operating commitment and remaining flexibility across a range of outcomes. The final report will justify reserve calculations, portfolio projections and any contribution range, including conditions that would

require a smaller contribution. Neither a model result nor favourable recent performance creates a funding guarantee.

As payments are made, we will review reserve coverage and portfolio composition within the submitted strategy. Implementation choices and trade notes will document how each decision supports the client's goals. Finalization requires student review of this framework against the complete client case; the strategy will be fixed at the IPS deadline, with subsequent implementation and reporting consistent with that commitment.
