

TITLE PAGE (DRAFT — BLOCKED)

Wharton Global Youth Investment Challenge — Investment Policy Statement

Team / roster: BLOCKED_MISSING_SOURCE

Date: 2026-09-27 (revised)

Authority: Missing 2026_WGY source PDFs and client facts.

ELEVATOR PITCH (maximum 50 words)

DRAFT BLOCKED: Reserve cash for obligations, hold a strategic allocation, and size risk with EWMA covariance. Our tests found no reliable return-forecasting edge, so we do not trade on forecasts or promise multi-year funding from them.

Word count: 36

INVESTMENT POLICY STATEMENT (maximum 500 words)

STATUS: DRAFT — BLOCKED_MISSING_SOURCE. This document is not a competition submission. Client wealth, payment dates, operating obligations, contribution amounts, roster details, and eligible instruments were not available in the research workspace. No values were invented.

Investment objective (research stance): Protect operating reliability first, then preserve flexibility for a responsible facility contribution when client facts are supplied. The portfolio is a strategic allocation sized with EWMA covariance. Leakage-free walk-forward tests found no return forecast that beat the historical mean, so the strategy does not rely on forecasts or on complex machine-learning architectures for client decisions.

Liquidity and reserves: Maintain an explicit operating-reserve rule sized to near-term obligations once those schedules are provided. Do not fund operating payments from unverified short-horizon forecast alpha. Transaction-cost research scenarios of 0/5/10/25/50 basis points per dollar traded (one-way) were registered with 10 as the base research assumption—not a verified trading-cost estimate.

Risk: Prefer transparent risk forecasts (EWMA/shrinkage). Rebalance on a schedule rather than on predicted returns. Scenario and controller experiments use research-proxy liabilities only and are not real-world funding guarantees.

Governance: Technical model identities remain in the internal research report. This IPS does not list twelve architectures. Trading Notes Analysis remains PROPOSED until three verified WInS executions are supplied. No login, trade, email, or submission was performed.

Word count: 211

STRATEGY NOTES (maximum 2 pages — research summary only)

Selected research components: strategic allocation; B_EWMA_COV risk sizing. Return forecast: none selected — ridge showed no skill over the historical mean in leakage-free walk-forward tests. The earlier synthetic lockbox edge was a data-leakage artefact and is withdrawn; the ETF lockbox result was negative. Controller/funding results remain research-proxy until liabilities arrive.
